Qualitative

The Liquidity Coverage Ratio (LCR) is a global minimum standard for bank liquidity. It aims to ensure that a bank has an adequate stock of unencumbered High-Quality Liquid Assets (HQLA) that can be converted into cash easily and immediately to meet its liquidity needs for a 30 calendar day liquidity stress scenario.

The LCR is calculated by dividing the amount of High Quality Liquid unencumbered Assets (HQLA) by the estimated net outflows over a stressed 30 calendar day period. The net cash outflows are calculated by applying RBI prescribed outflow factors to the various categories of liabilities (deposits, unsecured and secured wholesale borrowings), as well as to undrawn commitments and derivative-related exposures, partially offset by inflows from assets maturing within 30 days. The average LCR for the quarter ended December 31, 2017 was at 98.96%, above the RBI prescribed minimum requirement of 80%. The average HQLA was ₹1,446,415.1 million of which government securities constituted about 86 %. The outflows related to derivative exposures (net of cash inflows) / collateral requirements and undrawn commitments constituted about 0.2% and 4% respectively of average cash outflow of ₹2,349,606.8 million. Average inflows from assets were ₹888,056.3 million.

Average LCR for December 31, 2017 increased compared to the previous quarter primarily due to increase in the average HQLA position.

A strong and diversified liabilities profile has been at the helm of the Bank's growth strategy. The Bank has consistently maintained a robust funding profile with a significant portion of funding through deposits. As of December 31, 2017 the top 20 depositors comprised 6% of total deposits approximately.
